MEMORANDUM FOR: Deputy Director for Processing

THROUGH : Chief Aerospace Vehicle Analysis Division

SUBJECT : TADS Performance On Split VM2

1. During the past few weeks the performance of TADS has been the worst we've noted in a year. ODP's Engineering Division is researching the problem for the case where the VM2 processor is normally configured. What this memo is concerned with is that on occasion during the past two weeks half of the VM2 system has been used for other purposes. During that time the performance of TADS has been so slow as to cause all users to logoff. Response times increased in some cases by a factor of ten.

2. OSWR is requesting that the VM2 configuration be given a higher priority to avoid changes. Historically VM1 has had priority, but OSWR production is now so dependent on VM2 that it should have equal priority. Based on the problems of the past few weeks it is apparent that when VM2 is split that TADS is effectively down. TADS is so slow during those periods as to be useless.

3. The only other alternative left OSWR is to have our non-TADS users begin to use VM1 as their primary machine when trouble arises. Hopefully, since we are the largest VM2 user group, this would improve the performance of TADS. We'd be glad to discuss these problems and be of any help we can be to improve the situation.
